

# The Role of International Geneva in UN 2.0

Many historic stories are held by this place  
But Geneva could hold the future too!  
In UN 2.0, Geneva could be the face  
Of change for the world, good, just, and true

The future of accomplishments could be built here  
And Geneva could always follow previous creations  
But if tangible developments is what we seek near  
Then something to consider is innovation

Still, we can learn from experiences in the past  
Or consider the situations around that we see  
And all the new data, from first through last  
Could be relevant to helping this world, you, and me

And as the world develops into a more modern age  
Digital use could help achieve what we seek  
It can reach out to more platforms, help us turn the page  
Let the audience understand how we could help when we speak

But being stuck in the past will do us no good  
Having foresight will help us predict what we must defeat  
And planning ahead to do what we should  
So that we get a chance to overcome it before we retreat

Another aspect to consider is looking at reactions from before  
Studying everyone as behavioural science may  
Give us a chance to understand others more  
And give everyone a chance to have their say

Many problems in our world exist  
From environmental to our communities  
Geneva can do many things to assist  
And even offer some new opportunities

Using this *Quintet of Change* will enable us to  
Accelerate the application of the SDGs  
There's many things that we've yet to do  
That will help our country, our world and our peace
